

Bitbucket gives your team everything you need to build, track, and deploy your software better.

Built for professional teams

Distributed version control system that makes it easy for you to collaborate with your team. The only collaborative Git solution that massively scales.

Git that massively scales

Have uninterrupted access with Bitbucket Data Center. Fast performance wherever you are in the world.

Code collaboration on steroids

Approve code review more efficiently with pull requests. Hold discussions right in the source code with inline comments.

Best-in-class Jira integration

Release 14% more often with Jira Software and Bitbucket, which are seamlessly integrated from branch to deployment. Create Bitbucket branches from within Jira Software or transition issues without ever leaving Bitbucket.

Flexible deployment models

Enjoy flexible deployment models for teams of all sizes and needs. Host it in our cloud or manage it on your servers.

Unlimited private repositories

Get unlimited private and public repositories with Bitbucket. Bitbucket Cloud is free for small teams of 5.

Bitbucket is the Git solution for professional teams. More than 1m software teams and 6m developers love Bitbucket.

Bitbucket Pipelines

— Continuous Delivery in the cloud

Pipelines is built right within Bitbucket Cloud giving you end-to-end visibility from coding to deployment. With Bitbucket Pipelines there's no CI server to setup, user management to configure, or repositories to synchronize. Just enable it in one click and you're ready to go.

The screenshot displays the Bitbucket Pipelines interface. On the left, a sidebar shows the repository 'meetings-app' with various actions like 'Clone', 'Create branch', and 'Pull requests'. The main area shows a pipeline named 'Chiphat / meetings-app / Pipelines' that has failed. The failure is associated with a commit '8d1e4bd' and a user 'Joshua Tjin'. The pipeline configuration is visible, showing a task 'npm test' that failed. The logs on the right show the execution of 'npm test', including the command 'meat@0.3.3 test /opt/atlassian/bitbucketci/agent/build' and the output of the test command, which includes an error: 'Error: Expected 5 assertions, 6 ran'.

What will your code do?

“ With Git and Bitbucket, we're able to complete 3x as many code reviews, which ultimately results in fewer bugs, fewer support tickets, and better software.

Kurt Chase,
Director of Release Engineering, Splunk
